Universités Nouvelle-Aquitaine éditions

Publishing on the UN@ Platform

UN@ is a digital scholarly publishing infrastructure providing open access, supported by the universities of Nouvelle-Aquitaine. It works with partner university presses to disseminate and enhance the visibility of their scholarly publications.

Articles are available in HTML and as downloadable PDFs, together with additional content, at <https://una-editions.fr>.

You have chosen to publish on the UN@ platform in digital open access. Please follow the steps below to prepare your manuscript as effectively as possible. The typographical and bibliographical guidelines are those provided by your publisher, the Ausonius Éditions. Please refer to the guidelines supplied above.

1# Material to provide once the manuscript has been accepted • To prepare your book for online publication and ensure effective indexing and discoverability on UN@, please provide the following:

- a page containing the title of the book, the names of the authors or academic editors, and any partners or funding bodies;
- a table of contents;
- a list of approximately 30 keywords in the language of publication, ranging from the broadest concepts to the most specific, to support indexing and discoverability; an English version of these keywords will also be required;
- an abstract of no more than 1,000 characters in the language of publication, accompanied by an English translation. Other languages may also be proposed for the digital version;
- one or more images that may be considered for the cover; once an image has been selected, a full caption including credits and reproduction rights will be required;
- for each author, co-author or academic editor, the attached author information form, completed carefully.

Note on ORCID: an ORCID identifier is mandatory for authors published on UN@. This persistent international identifier enables authors to be identified unambiguously and their publications to be linked to their scholarly activity. It is used in particular for deposits made in Nakala and for DOI assignment.

2# Folder organisation • Please divide your manuscript by chapter or article. In the latter case, organise the illustration, caption and bibliography files in a separate folder for each author, following the order in which the contributions appear in the publication.

- Folder naming convention:

Collection-name_number-in-collection_author-name+position-in-table-of-contents

Example: in volume 25 of the PrimaLun@ series, Maxime Fabre's contribution appears seventh in the table of contents:

Folder: PrimaLuna_25_Fabre_7

Files:

PrimaLuna_25_Fabre_7_texte

PrimaLuna_25_Fabre_7_biblio

PrimaLuna_25_Fabre_7_legendes

PrimaLuna_25_Fabre_7_fig1

Note on indexes: digital publication allows targeted searches to be carried out directly in the online text or PDF. Indexes whose sole purpose is to point to occurrences or page numbers are therefore generally unnecessary. However, indexes, glossaries or reference lists that constitute scholarly tools in their own right—for example, when they organise, connect or analyse data—can of course be included in the publication. Their preparation should be discussed with the editorial team.

3# Enhanced content and supplementary resources • The UN@ platform makes it possible to bring textual and multimedia content into dialogue. A publication may be enhanced in a variety of ways: by integrating video or audio material, links to online resources, image corpora, databases, research blogs or other associated scholarly resources (see, for example: <https://una-editions.fr/introduction-clinique-du-droit/> or <https://una-editions.fr/lartisanat-du-des-terrains/>).

This material may be embedded directly within the text or provided as supplementary resources. Where appropriate, the UN@ team assists authors with the design and integration of such enhancements and, where necessary, with issues relating to dissemination rights.

Examples of multimedia content:

- videos: documentaries, recorded lectures, film excerpts, online INA content, etc. (example on UN@: <https://una-editions.fr/introduction-clinique-du-droit/>);
- audio material: interviews, music, podcasts (example on UN@: <https://una-editions.fr/epifonias/>);
- hyperlinks: to research centres, websites, blogs and research notebooks (example of an author's blog: <https://blogs.univ-poitiers.fr/p-drouet/>);
- image catalogues and databases (example of a database linked to a UN@ publication: https://heurist.huma-num.fr/heurist/?db=metro_2poids2mesure&website=3134);
- rights-free images available on Gallica or other free-access websites: <https://una-editions.fr/onesime-reclus-et-le-touring-club-de-france/>.

Other supplementary content:

- Zotero bibliography
A Zotero bibliography may be created for your publication to enable online use and sharing of bibliographical references. It may be prepared by the authors or produced by UN@ as an editorial service.
- Translations
The digital version may include a complete translation of a book or translations of selected chapters or articles. Other forms of multilingual dissemination may also be considered depending on the editorial project (example on UN@: <https://una-editions.fr/colours-english-alabaster-panels/>).

4# Illustrations

If your manuscript contains illustrations, please follow the recommendations below:

- Separate files: illustrations must not be embedded in the Word file. They must be supplied separately, and their intended position must be clearly indicated in the text.
- File quality: illustrations must be supplied at a resolution suitable for publication, ideally 300 dpi at the intended reproduction size. Please provide source or uncompressed files wherever possible: TIFF, PNG, PDF, EPS or maximum-quality JPEG.
- File naming: files must follow the naming convention described above, for example: PrimaLuna_25_Fabre_7_fig1.
- Publication format: books are published in a 16 × 24 cm closed format; illustrations must be sized and legible accordingly.

- Captions and credits: provide a separate file containing the complete list of captions, including for each illustration its creator or source, its date where known, and all necessary credits and rights statements.
- Tables: tables must be supplied in an editable format, preferably Word or Excel.
- Reproduction rights: authors must ensure that they hold the rights required to reproduce and disseminate in open access the illustrations and media used. The absence of clear information on reproduction rights does not necessarily mean that use is impossible. Permission may in particular be sought from the museums, institutions, agencies, artists or rights holders concerned. The UN@ team can assist authors in identifying rights and, where necessary, in requesting permission for a scholarly, open-access, non-commercial publication.
- Data deposit in Nakala: The data and resources associated with each publication (illustrations, audio material, native video files, etc.) are deposited in Nakala, Huma-Num's research data repository. They are described with metadata and assigned a persistent identifier, enabling them to be cited and reused.

For each book, UN@ creates a dedicated collection in Nakala bringing together the data and resources associated with the publication, as well as the final PDF of the book, which is also freely available on the UN@ platform.

5# Open access and publication licence

Publications disseminated on UN@ are made fully available in open access. Dissemination under an open licence is a condition of publication on the platform.

UN@ publications are released under the Creative Commons CC BY-SA licence, which permits sharing and adaptation of the content, including for commercial purposes, provided that the authors are credited and any adaptations are distributed under the same licence.

Some third-party content may nevertheless be subject to specific reproduction permissions. In such cases, the reuse conditions stated in the credits for those materials take precedence.

These deposits contribute to the sharing, preservation and enhancement of research data in accordance with the FAIR principles: data that are Findable, Accessible, Interoperable and Reusable.

In summary: the production process for your book

- Once the manuscript has been accepted, the book page is created in the “In preparation” section of the UN@ platform using the metadata supplied in advance (see 1#).
- The manuscript is then processed by the editorial team using the Métopes publishing workflow. This stage includes copy-editing, applying styles to the Word documents, processing the illustrations, and preparing the data and resources for deposit in Nakala.
- Proofreading takes place in two stages: the first proofs allow the content to be finalised; the second proofs, after layout, allow the form and presentation to be checked and approved.
- Once approved by the authors, the digital publication is published on UN@ in HTML and PDF. Individual articles or chapters can also be downloaded separately. Supplementary resources and, where one has been created, the Zotero bibliography are linked to the publication.
- The data and resources associated with the book are deposited and documented in Nakala, in a dedicated collection that also includes the final PDF of the publication.
- Five print copies are produced by UN@ for legal deposit and institutional dissemination (Bibliothèque nationale de France, regional university libraries and the UN@ display copy). Authors or academic editors may order additional copies at their own expense. The approved print files remain available from our partner printer, PPI – Pôle Production Imprimée de l’Université Bordeaux Montaigne, to enable additional copies to be printed on demand.
- After publication, authors are encouraged to share consultation links and announcements through their networks. Deposit of the book or individual contribution in HAL is also encouraged.
